

INDOOR PLANT CARE

Nowadays, the major quest is how to keep the plants fresh and healthy indoors. The Smart Greenify device will be an answer to this.

How to keep them fresh and happy?

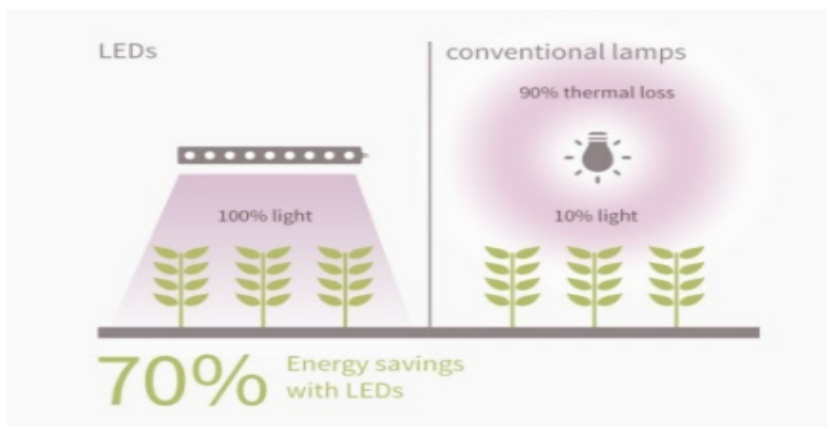

Our Product is the future for Indoor plant care:

It not only makes indoor plants grow effortless but also can make any kind of plant grow at home with artificial sunlight and climate conditions.

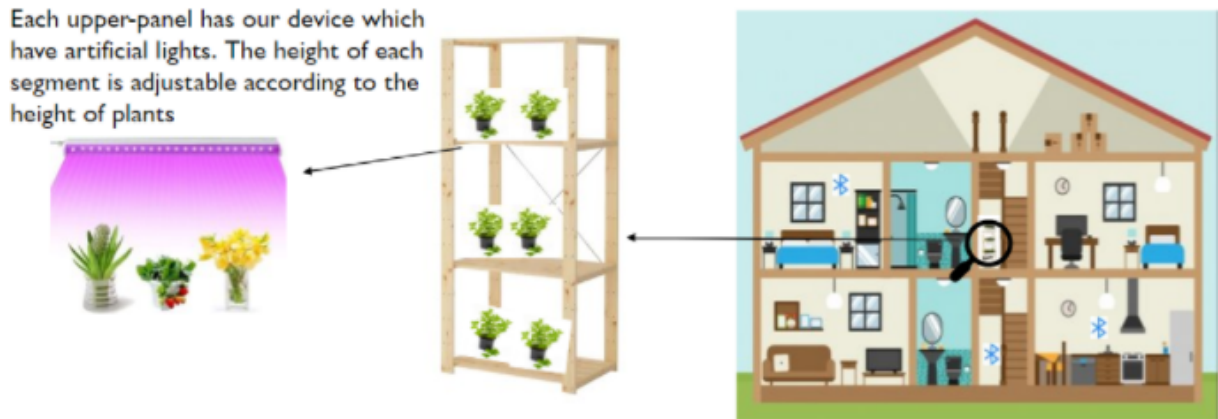

Indoor Garden - This product provides a mini garden that simulates natural habitats with light, temperature, humidity. With this garden, people can still enjoy watching their favorite plants growing up without spending so much time and effort taking

care of them. It can be thought of as our small green-house. The LED lights can provide artificial sunlight.

A small representation of the Smart Greenify device and how it is going to work is given below.

An indoor garden is another addition to our IoT house:

Many other features like BLE and image processing will help to take care of the plants without demanding much effort from the owner.
